a
b
$\tau_{kink} > \tau_{max}$ (Turbulence)
Soliton Molecule ($N = 2$)
Single Soliton ($N = 1$)
$\tau_{kink} < \tau_{min}$ (Decays to CW)
Kink width τ_{kink} (ps)
Normalized kink drive $F_{ini}/|A_{sat}|$
Theorem 1b $U_{mol}(\Delta\tau)$
Bound states $\Delta\tau^*_{1,2,3} = 5.4, 9.2, 12.9$ps
Potential $U_{mol}(\Delta\tau)$ (norm.)
Inter-soliton separation $\Delta\tau$ (ps)
