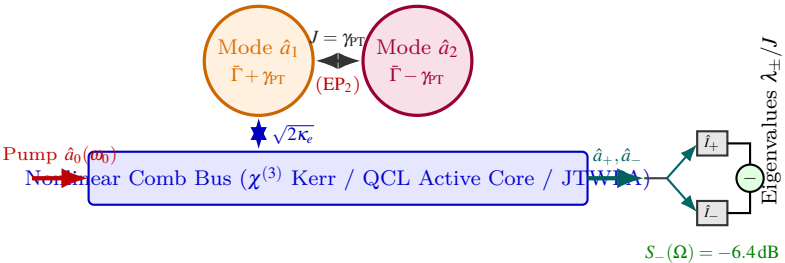
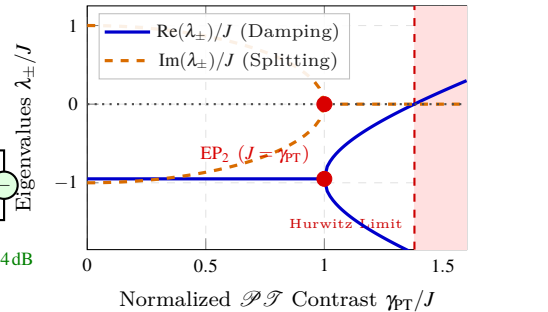
(a) Non-Hermitian EP_2 Dimer & Twin-Beam Quantum Comb Architecture

$$R_{11}^{\mathrm{EP}_2}(\delta) = (\tilde{\Gamma} - i\delta)^{-1} - \gamma_{\mathrm{PT}}(\tilde{\Gamma} - i\delta)^{-2} \implies \mathscr{F}_{\mathrm{EP}_2}/\mathscr{F}_{\mathrm{Lorentz}} = \mathbf{6.8}\times$$





(b) Loaded EP_2 Coalescence & Hurwitz Boundary
